Slagelse 24th October 2011

Dutch EMS Manufacturer sets up business in Denmark

-Solid Semecs B.V. see future growth in the Danish and Scandinavian Market

Solid Semecs B.V. is now implementing the next part of an ambitious growth strategy, which is founded through a solid market position domestically and through subsidiaries in Germany, Slovakia, United Kingdom and now Denmark.

The company has years ago seen the development of the European EMS market, where major electronics companies have moved production to Asia, due to the lower costs. To counter this trend Solid Semecs developed a business concept where the customer receive a 100 % local technical and commercial support, while the production is carried out in a top modern facility in Slovakia, where Semecs simultaneously benefit from lower wage costs and still maintaining European excellence, efficiency and flexibility, with very competitive prices and customer service that tops most of the local Central / Northern European EMS providers with regard to technology and support.

Semecs Nordic – and new Danish jobs

Solid Semecs B.V. opens today, a Danish subsidiary – Semecs Nordic, with address in Slagelse, where Sales Director Nordic Egon Lykke Nielsen, previous with the former HPI, together with local Danish technical staff will service the Danish and Scandinavian industrial customers. Within the first month of operation 1-2 technicians will be employed, securing that all new customers will get a competent and local support, both commercially and technically. It cannot be excluded that further jobs will come to Slagelse in the future.

Danish quality at Slovakian prices

is the business concept to safeguard against further relocation of jobs from Europe to Asia, and Solid Semecs has managed with this business concept based on quality, good prices and keeping the customer in the centre of attention, to win back from Asia several orders from large industrial customers in Germany and Holland. Solid Semecs is ISO certified according to ISO 9001, ISO/TS 16949, ISO 13485 and ISO 14001.

Areas of focus

Semecs has its core competence in mass production and production of complex electronics, including the complete logistic solution, from procurement to finished product in the customer's own distribution package. Customers are mainly located within the Automotive, Renewable Energy, Security, Medical, LED and Several Industrial applications.

Environment and modern production facilities

Semecs is currently investing in what will be the most modern and most energy efficient electronics manufacturing facility in Europe, the new facility is near the existing plant in Vrable where the current 4.000 m2 in several floors, will be replaced with 8.000 m2 in one level, where 220KW of solar panels are placed on the roof of the building making it nearly energy neutral.

This is meant to send a strong signal to customers that Semecs take the environment very seriously, and that Renewable Energy is a customer segment, which is at high priority now and in the future. It is off course also due to the Danish and Scandinavian position in the market segment that Semecs is now opening a sales office in Denmark.

Solid Semecs BV – Solid Semecs GmbH – Semecs s.r.o.® - Semecs Nordic
The challenge of Partnership

Our People take the challenge to make each delivery a recommendation for future business

Solidity and reliability

Solid Semecs is one of Holland's and Europe's fastest growing EMS business and this based on a solid financial background, which enables Semecs to put customers and suppliers first in the value chain, in perfect partnership. Delivery on time and in the agreed quality or better is always the company and the owners goal – hence the motto "The challenge of Partnership" – Our Future will be created by the ability to move boundaries.

Local support

Semecs has a philosophy that dedicated customer's teams consisting of sales and technical staff, who have direct communication and access in the manufacturing plant and support of the local customers, securing only one point of access, and that is through the local office. Solid Semecs and Semecs Nordic are welcoming our new customers.
